

# Side2Side

transform under utilised space

Side2Side is the ideal Compactus for transforming under utilized areas into efficient storage space. It's really simple! We just place a row of mobile shelving in front of a row of static shelving. The advantage is that it has more pick faces and faster access to stored items than conventional Compactus units. Side2Side turns the most unconventional areas into unique and productive storage spaces.

Side2Side also provides more "pick-faces" and faster access to stored items than conventional Compactus units.

#### Application

Perfect for alcoves, narrow spaces and unusually shaped rooms.

Specifications	Dimensions
